

Precision and perfection for pragmatic results

KPRO was established in 2015. KPRO is professional in researching, developing, producing and integrating different verticles of sliding rollers.

KPRO cohere to the concept of professional development. In past have specialised extensively in hardware values, and robust, comprehensive solutions encompassing the hardware sector. **KPRO** takes products innovation as the essential part in development. KPRO is working with good reputation, high quality products with scientific technology to ensure the stable quality and optimize the products. KPRO examine, perceive and delivers the products that leverages the customers.

(FOLDING DOOR SYSTEM TECHNICAL DRAWING)

- Installation instruction:**
1. Installation of accessories: As shown in the installation diagram, on the right door panel edge, drill a 48mm-deep $\varnothing 10$ mm hole on the top, a 32mm-deep hole at the bottom, to respectively install the upper and lower fixed rotating shafts. In the position of at least 55mm from the edge of left door panel, drill two $\varnothing 10$ mm, 26mm-deep holes, one on the top, the other at the bottom. Install the hanging piece of hanging wheel on the top, the lower guide wheel at the bottom.
 2. Installation of invisible hinge: For the specific location and hole size, please refer to the installation diagram.
 3. Cut the top and bottom tracks according to the required space. Slide the hanging wheel into the track from the side of top overhead rail. Install the seat of the upper fixed rotating shaft in the fit between the right side of top overhead rail and the upper fixed rotating shaft.
 4. Fixation of top overhead rail: Adjust the position of top overhead rail. Fasten the top overhead rail with screws, to keep it in horizontal position.
 5. Adjust the fit between the door and the top overhead rail. Lock the hanging piece and hanging wheel tightly together with nuts.
 6. Place the lower guide wheel into the lower guide rail, and fasten the seat of the lower fixed rotating shaft with M4x30 countersunk head screw. Adjust the position of the lower fixed rotating shaft and the rotating shaft seat to make them fit.
 7. Adjust until the gap is uniform and the top and bottom tracks are parallel to each other. Then fasten the lower guide rail. When the pulley can flexibly rotate, retighten the nuts before use.

- Notes:**
1. As the bearing capacity of hanging wheels is 40kg, it is suggested that the door to be installed should not be more than 40kg;
 2. The applicable door is 20~27mm thick. The invisible hinge is usually installed at the middle of the door thickness. If the thickness is over 27mm, the invisible hinge may be biased.
 3. B should be 5~10mm greater than A.

1. Damper installation

Put damper inside the rail, attention direction of damper.

60mm left between damper and end of rail.

2. Rail installation

Attention direction.

3. Plastic end function

4. Set up the damper

Damper install on the upper track.

Turn the screw of end cap to take out the rail

According to picture

5. Slot on door panel

Regulate the damper according to picture

make slot symmetric

slot size:

6. Runner installation

1. Screw the runner

2. Lock the runner

Attention: runner should be horizontal during installation

7. Door panel installation

1. Door can't be lean over 20 degree on rail in case of breaking rail

2. Loose the button on runner

8. Door gap regulation

1. Push the door at the end to position the damper.

2. Screw the runner to regulate up and down gap

9. Lock the damper

Use allen key lock the damper

10. Remark

1. This manual is only valid at the standard configurations of wardrobe to explain installation method which installs the damper into the upper rail. Customers can use different installation method according to the actual application. The damper should be installed in the same time as the opposite angles installation; and also can use double upper dampers or double down dampers installation in the same time. or

2. T305 product also apply to solid wood or board furniture, such as wardrobe, cupboard cabinet, bookcase, TV cabinet, Decoration cabinet etc.

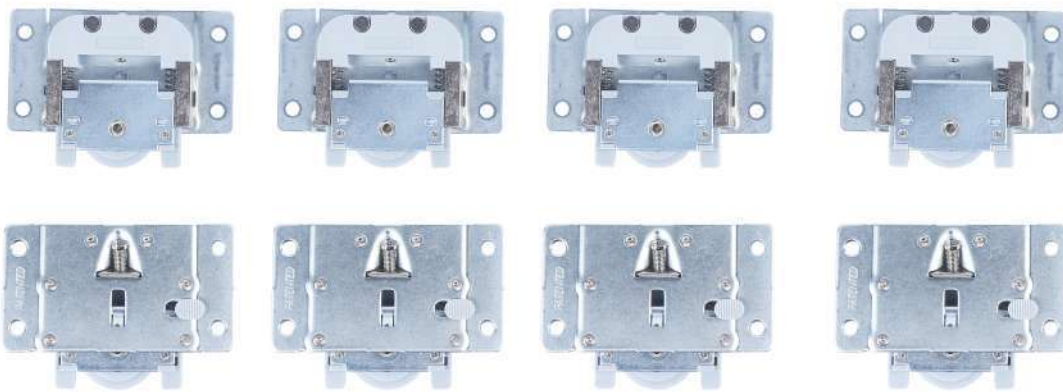

Size on wardrobe

Customers can definite by their own.

Tall Unit

Snake Basket

Code : 9090
Description : Soft Close Function
 6 Trays, New Designer
 Stainless Steel Basket
 Adjustment at every 3"
 Special fitting for basket
 Dotted finish anti skid
 Stainless Steel base
Product Dimension : 14" x 19" x (6' - 7')
Cabinet Dimension : 15" x 20" x (6' - 7')
Door Width : 15"
Load Carrying
Capacity : 80kg

Code : 9091
Description : Soft Close Function
 Easy to Install
 White Colour
 Anti Skid Base
 Full Tray Access
Product Dimension : 35" x 20" x 26" - 30"
Cabinet Dimension : 36" - 40"
Door Width : 18"
Load Carrying
Capacity : 20kg

Pantry Unit

Magic Corner

Code : 9092
Description : New Designer Baskets
 Opening angle 135)-150)
 Adjustment at every 3"
 Basket with inbuilt
 Special fitting for basket
 Dotted finish anti skid
 Stainless Steel base
Product Dimension: 17" x 20" x (6' - 7')
Cabinet Dimension: 18" x 20"
Door Width : 18"
Load Carrying
Capacity : 80kg

Code : 9093
Description : Soft Close Function
 New Designer SS Basket
 Dotted Finished
 Anti Skid SS Base
 Wider Baskets
Product Dimension: 35" - 39" x 20" x 21"
Cabinet Dimension: 36" - 40"
Door Width : 18"
Load Carrying
Capacity : 20kg

TALL UNITS

(304 / 202)

Code : 9094

Features :

- Heavy duty bottom channel
- 90 degree rotation for easy operation
- Adjustable height between 6' to 7'
- Easy Installation
- Shelves adjustable at every 3"
- Size also available between 4' to 5'

W x D x H
